About Me

Arita Tragulmalee

I'm a Computer Engineering graduate with a passion for both **UX/UI design** and **frontend development.** I enjoy creating interfaces that are visually appealing while remaining intuitive, accessible, and easy to use.
I'm especially interested in bridging the gap between thoughtful design and functional implementation💕

Education

King Mongkut's University of Technology Thonburi
Computer Engineering
August 2022–June2026

What I studied

Design & Experience
- User Experience/User Interface
- Human–Computer Interaction
- Humanities Computing

Development
- Software Engineering
- Full-Stack Web Development

Experience

Electricity Generating Authority of Thailand (EGAT)
Web Design & Digital Content Intern
June 2025–July2025

Skills

- UX/UI Design
- Frontend Development
- UI Animation & Motion
- Minimal Illustration

Helmet Navigation

University Project · Human-Computer Interaction Course

Helmet Navigation is a university research and interaction design project exploring how wearable navigation interfaces could support motorcycle riders. The project focused on understanding rider needs, designing a helmet-based navigation interface, and evaluating the user experience through a simulated VR prototype.

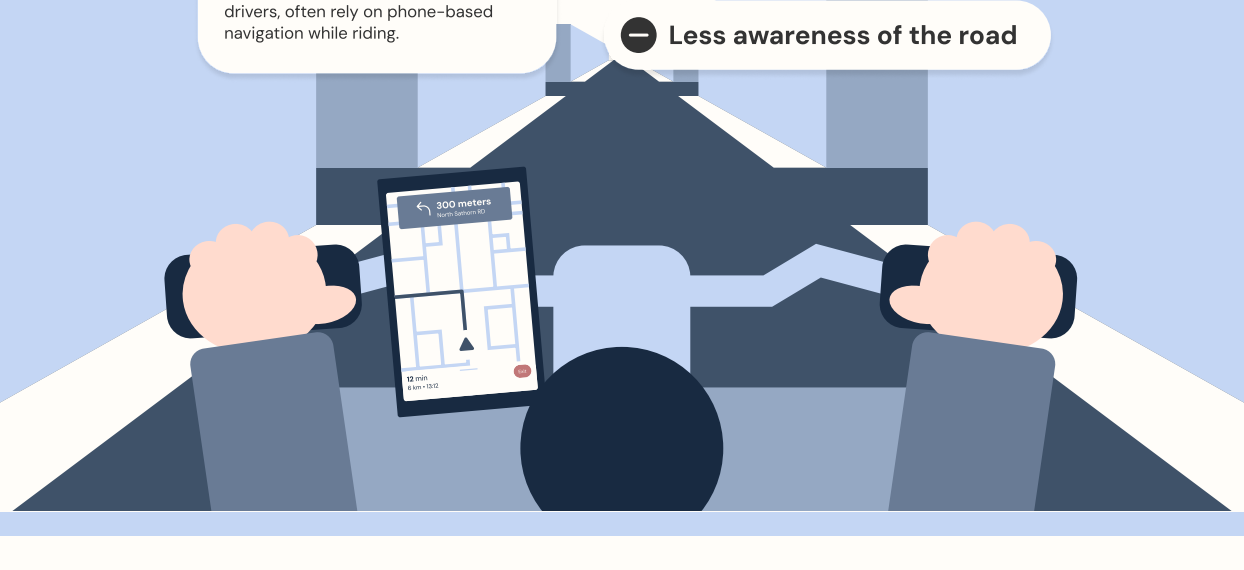
-This project was developed as a university study and prototype, not as a production-ready helmet product-

Problem

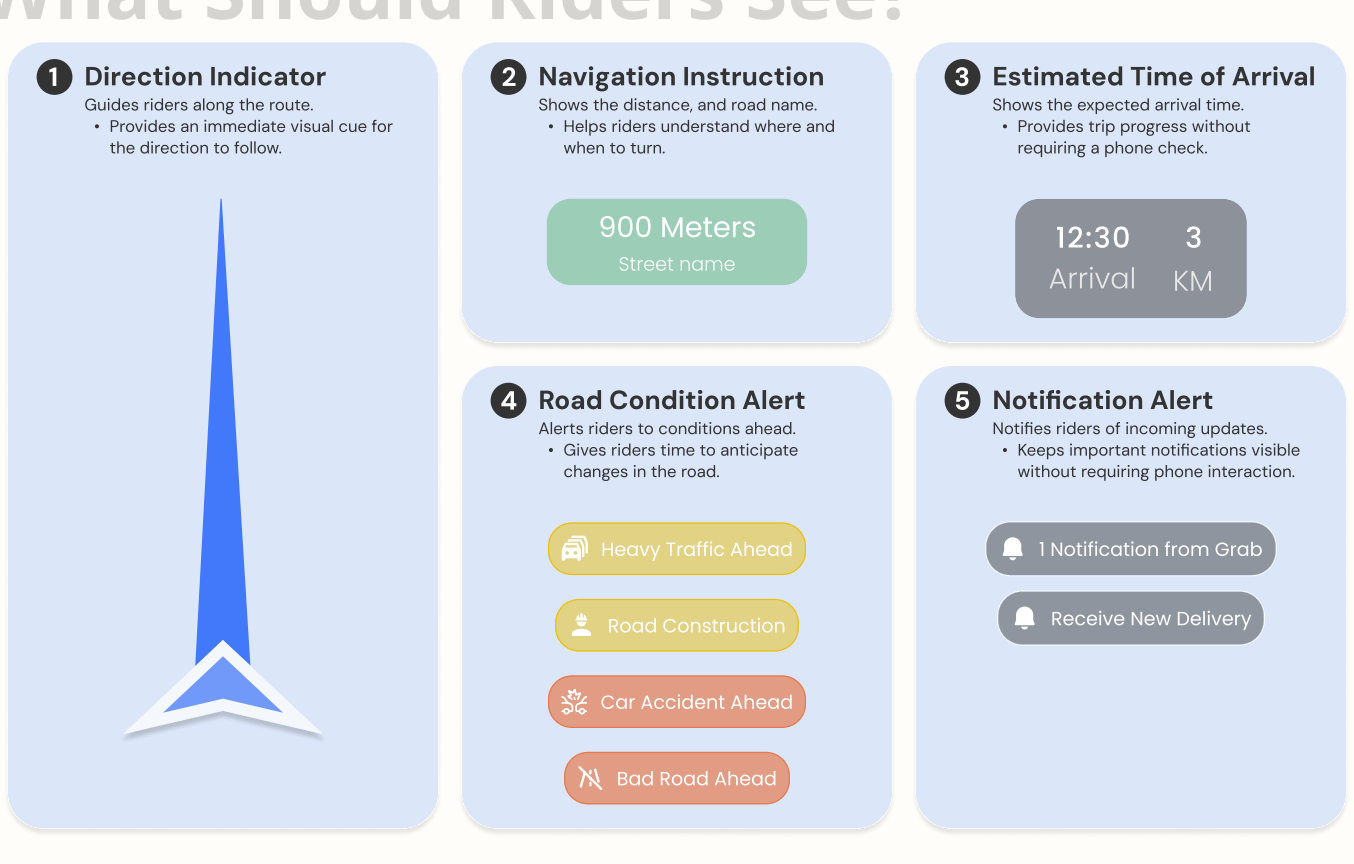
Traditional Tools: Handlebar-Mounted Phone Navigation

Divided Attention Between Navigation and the Road
Motorcycle riders, especially delivery drivers, often rely on phone-based navigation while riding.

- Glance down at navigation
- Divided attention
- Less awareness of the road



What Should Riders See?



1 Direction Indicator
Guides riders along the route.
- Provides an immediate visual cue for the direction to follow.

2 Navigation Instruction
Shows the distance, and road name.
- Helps riders understand where and when to turn.

900 Meters
Street name

3 Estimated Time of Arrival
Shows the expected arrival time.
- Provides trip progress without requiring a phone check.

12:30 Arrival
3 KM

4 Road Condition Alert
Alerts riders to conditions ahead.
- Gives riders time to anticipate changes in the road.

Heavy Traffic Ahead
Road Construction
Car Accident Ahead
Bad Road Ahead

5 Notification Alert
Notifies riders of incoming updates.
- Keeps important notifications visible without requiring phone interaction.

1 Notification from Grab
Receive New Delivery

Designing for Minimal Distraction

Information hierarchy
Navigation information is prioritized because it is directly relevant to the rider's immediate task.

Minimal information
Only essential information is displayed to avoid overwhelming the rider.

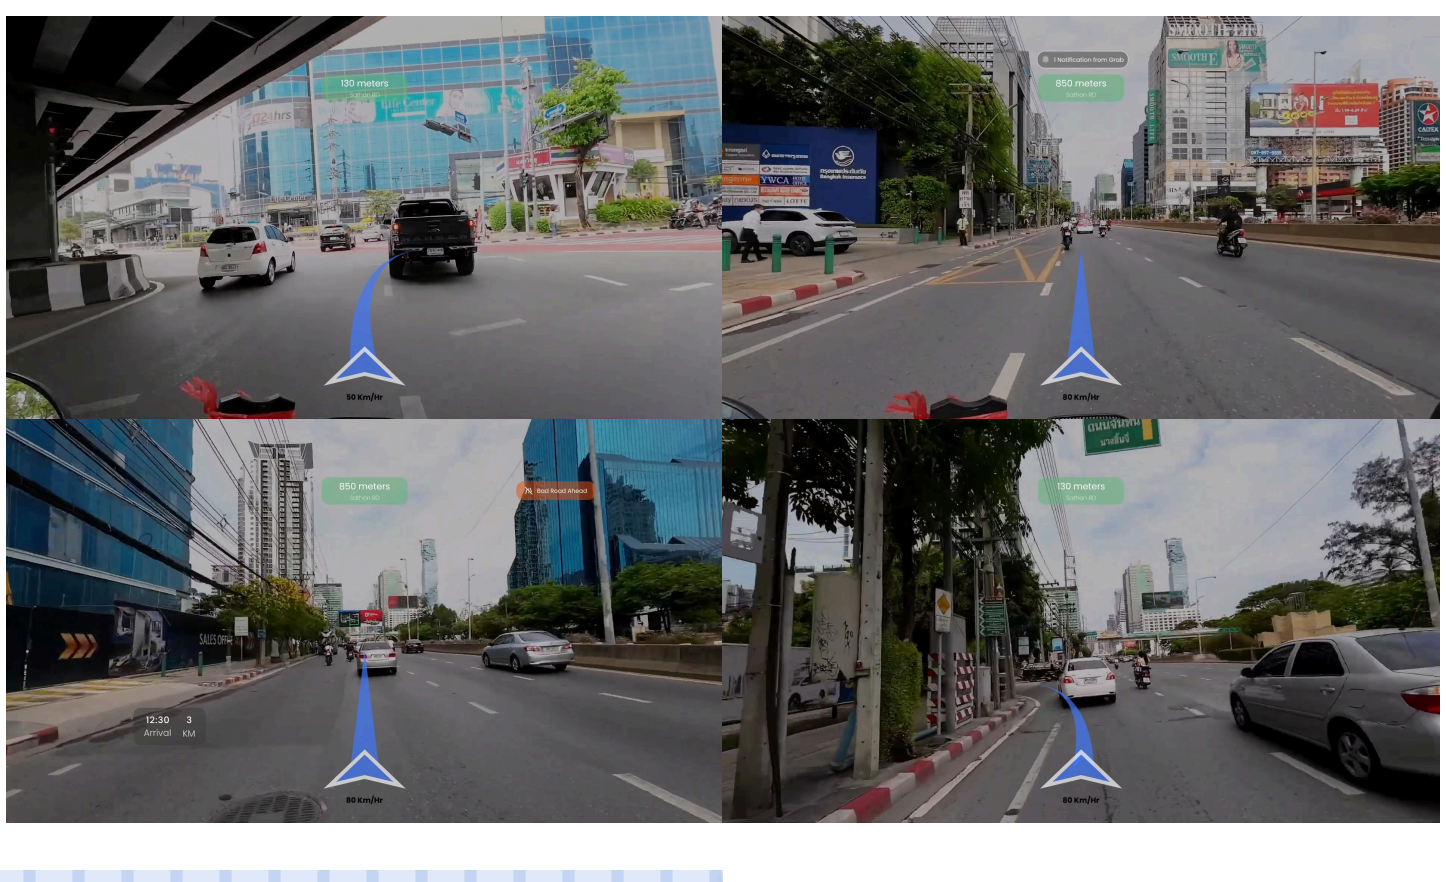
Peripheral placement
Less critical information, such as notifications, can be positioned away from the primary navigation area.

Quick recognition
Icons, colors, and short text allow riders to understand information quickly.

Based on these priorities, we translated the information into a heads-up navigation interface designed for quick, glanceable interactions.

Prototype

After deciding which components go where and when they appear, we composited them onto real motorcycle video footage from Bangkok in post-production.



Usability Testing

20 participants
Condition A
Traditional phone-based navigation
BASELINE
Condition B
Helmet Navigation
EXPERIMENTAL

Participants wore a VR headset and watched two motorcycle point-of-view videos, one per condition. As they watched, they verbalized what they observed in real time.

1. VR familiarization
2. Experience both navigation conditions (counterbalanced order)
3. Verbalize observations while viewing
4. Complete a questionnaire after each condition
5. Short semi-structured interview

User Evaluation

Response Time	Accuracy	Usability
0.25s Phone Nav	37.9% Phone Nav	68.3 Phone Nav
2.29s Helmet Nav	26.9% Helmet Nav	77.5 Helmet Nav

17/20 participants **felt safe** using Helmet Navigation
12/20 participants struggled to perceive the Road condition alert in time (Bad Road Ahead)
16/20 participants named the Direction indicator their favorite element
most cited reason for preferring Helmet Nav: **reduced distraction** while riding

The results show a gap between measured performance and perceived experience: Phone Navugation was faster and more accurate, while Helmet Navigation felt safer and more usable to participants.

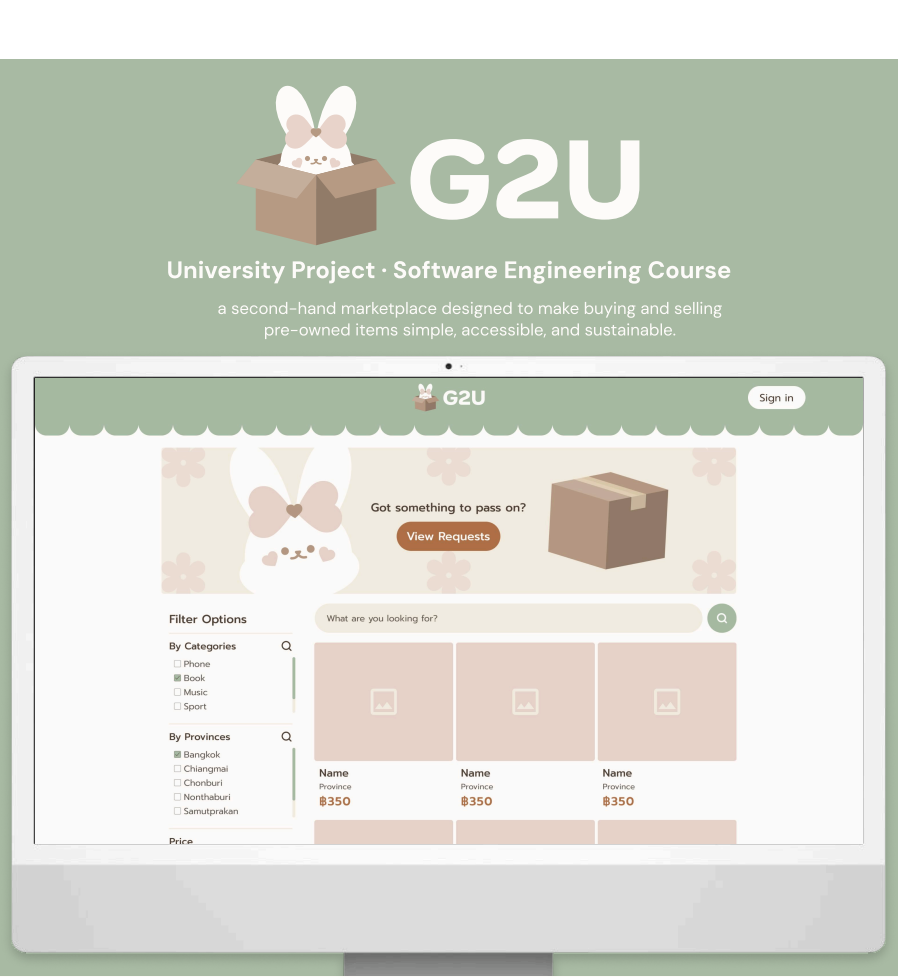
University Project · Software Engineering Course

a second-hand marketplace designed to make buying and selling pre-owned items simple, accessible, and sustainable.



Problem Statement

High costs for consumers
Budget-conscious individuals and families in Thailand struggle to afford everyday items.

Usable items going to waste
Many working items are thrown away or left unused at home.

No trusted resale channel
Sellers lack a convenient, reliable way to pass on used items.

Environmental impact
Constant discarding and buying new increases waste, resource use, and carbon emissions.

Target Users

People looking for affordable and sustainable ways to buy, sell, give away, and find second-hand items.

Individuals	Buying, selling, or giving away items they no longer need.
Alumni	Passing on university-related items they no longer need after graduation or moving to a new stage of life.
Student	Looking for affordable second-hand items, especially textbooks, university accessories, furniture, electronics, and everyday essentials.

Second-hand Market in Thailand

Sustainability mindset
More Thai consumers now prefer to reuse and recycle items instead of buying new.

Economic appeal
Quality second-hand goods at lower prices make buying used a practical choice for cost-conscious buyers.

ชื่ออะไรดี

(What's a Good Name?)
Single-page Thai name generator

Project Overview

"What's a Good Name?" is a single-page random Thai name generator. The brief called for a playful tone. The generator's database pairs two unrelated words at random, so the results are often absurd, and the design needed to lean into that humor.

Concept

The idea started from เสกชื่อ, "conjuring" a name.
That led to a witch's cauldron for dark mode, with a deep purple palette. For light mode I flipped the metaphor to a fish tank, using a soft gradient from cream to sky blue.

IBM Plex Sans Thai Looped ฟอนต์ภาษาไทยมีหัว	60	30
Prompt ฟอนต์ภาษาไทยไม่มีหัว	20-40	16-36

- IBM Plex Sans Thai Looped for the generated name. Looped letterforms are easier to read, which matters most for the unexpected word pairings.
- Prompt, a loopless face, for everything else, to keep the interface clean and modern.

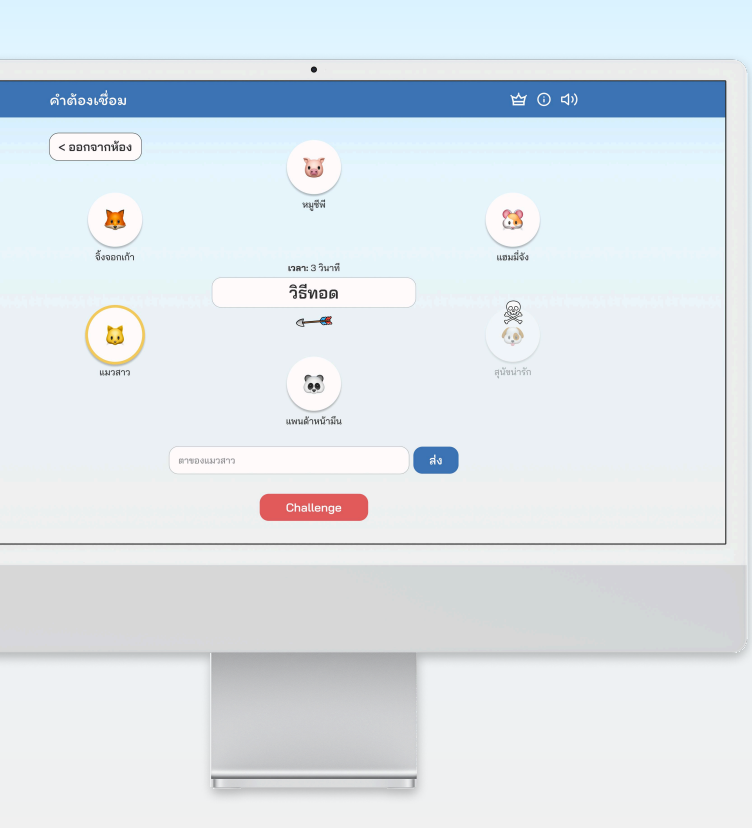
Original game by เทพลีลา

Web Designer



คำ ต้อง เชื่อม

Word Link

Word Link is a fast-talking party game where each player must say a word related to the one before. The longer the chain grows, the more fun it gets, and the easier it is to trap yourself.

Start

Project Overview

คำต้องเชื่อม EP.13

คำต้องเชื่อม Ep.13 x มีน,ชาบอล,อู๊ด @ohanaclip | ยกกำลัง
3.4M 3y ago

Word Link is one of เทพลีลา's most popular games, with millions of views on YouTube. Many viewers have watched the game and want to play it themselves.

How to play

Players take turns saying a noun that is related to, or connected with, the previous player's word.
- Answer within the time limit.
- Do not repeat a syllable that has already used in the round.
- Do not say words that are not nouns.
- If a word is misspelled, players decide whether to Challenge it or let it pass, since this affects the syllable-checking system.

Problem

When played in real life, the rule "Do not repeat a syllable" is hard to enforce. Players are usually playing among themselves, and nobody is checking the words for them.

Solution

An online version solves this. Players can join remotely with friends, and the platform checks syllables automatically. A built-in scoreboard also keeps score, so nobody has to count by hand.

Bai Jamjuree · Regular, Medium, SemiBold · 16–36px

Bai Jamjuree

Since "Word Link" is a game about Thai words, we chose a looped Thai typeface to make the text easier to read.

ก เอ๋ย กไก่ ข ไข่ ในเล้า ฃ ขวด ของเรา ค ควาย เข้านา ฅ คน ขึงขัง ฆ ระฆัง ข้างฝา ง งู ใจกล้า จ จาน ใช้ดี

Landing

Users can choose from 6 avatars, enter their name, and read how to play. The "About" button also credits เทพลีลา.
